

SMART LIQUID
RUBBER SOLUTIONS
FOR A **SUSTAINABLE
FUTURE**

POLYVEST[®]eCO

POLYVEST® eCO

SUSTAINABLE FEEDSTOCK

GENERAL

POLYVEST® products support the transition to a circular economy. We can replace fossil resources with bio-based, bio-circular and circular feedstocks in the production of our products.

CERTIFICATION

POLYVEST® is certified by the ISCC organization (International Sustainability & Carbon Certification) to operate under the ISCC Plus certification scheme based on mass balance approach. We can guarantee the traceability and transparency of the raw materials streams along the value chain.

SUSTAINABLE SOLUTIONS

Liquid polybutadienes are used as a binder or additive for rubber-based formulations. Our eCO grades present identical physicochemical properties as the traditional POLYVEST® portfolio, which directly reflects in a drop-in solution with the well-known product performance but with a reduced carbon footprint.

MAIN BENEFITS FOR YOUR FORMULATION:

- Low viscosity
- Excellent chemical resistance to acids and bases
- High water resistance
- Excellent electrical insulation properties
- Low temperature flexibility
- Low moisture and oxygen permeability

SUSTAINABLE LIQUID RUBBER

POLYVEST® eCO is used in manifold applications to improve the sustainability of end-products and reduce CO₂ emissions.
